Water treatment

Water treatment
Contents

Providing the proper water treatment will:
- avoid the risk of altering the taste and appearance of your foods
- reduce scale build-up therefore de-liming is less frequent, thus resulting in additional savings in operating costs
- extend the life of your appliance
- guarantee lower maintenance costs

Electrolux Professional suggest you to check your water quality in order to choose the right water treatment solution:
- water softener for high concentration of calcium
- water nanofilter or reverse osmosis filter for high concentration of calcium and chloride

Consumables - Tokens

Tokens offer customers flexibility and ease of use: they can be handed out for free, the risk of burglary is low, customers can choose/vary the price for a token depending on the applications and they can combine tokens with other applications ex. in camping sites or apartment house laundries. Use of tokens is also beneficial in international environments such as hotels where guests do not necessarily have coins in the local currency.

Electrolux Professional offers a wide selection of tokens to meet the need of diversity. There are 14 different tokens available with variations in marking, color, diameter and thickness. When selecting token, please consider the following:

▸ Select a token which differs most from your local currency

▸ Select a token which differs from other token operated launderettes in the neighborhood

▸ Select a token which differs from other nearby vending machines

Dryer Balls

The dryer balls use specially designed nodes to physically break down the stiffness created by water drying in fabric, thus softening laundry without the introduction of toxic chemicals.
The two balls have different tensile strengths (one is harder than the other) with different shaped softening nodes. Square nodes compress and soften fabric; round nodes relax fibers to reduce hardness. They work in combination to lift and separate the laundry whilst tumble drying. They also retain the heat and transfer it to the clothes as they tumble, aiding the drying process. For tumble dryers.
